Tim,

Courtney Woods from UNC (http://sph.unc.edu/adv_profile/courtney-g-woods/) contacted me to see if we could support an investigation of the potential PFAS related impacts associated with operations at the Sampson County Landfill after my recent presentation at the North Carolina Environmental Justice Summit in October. She has a graduate student that is ready to work with us to help conduct this research.

A copy of our current MOU with UNC is attached above.

Thank you,

Andy

Andy,

I'm worried about the heavy demand on the lab. Let's talk and make sure we have capacity before making any offers / commitments.

Tim

Renea,

I don't think we have analyzed any surface water from the area around the Sampson County Landfill, but this would be a logical place to begin exploring potential impacts from this operation.

The recent NDPES permit application for Chemours (attached above) indicates that they send 35,000 lbs of waste to this landfill every week. It is my understanding that this has gone on since at least 2002.

We would like to work with you and NC DEQ to obtain representative samples of this sludge and to gain access to any monitoring wells on or near this facility to begin assessing the potential impacts from this site.

Please let us know how we can work with you to evaluate this situation.

Thank you very much,

Andy

Subject: Sampson County Landfill

Mark, Andy and Seth,

Has NERL conducted any surface water studies in the Roseboro area/near the Sampson County landfill for PFAS? Based on a map, it appears to involve the areas located near Bearskin Swamp, Mulatto Branch, South River, Beaver Dam Creek, Castle Mill Creek.

Thanks for your assistance!
